There are several people I would like to thank: Steve Scaysbrook, Roger Williams, Bill Vincent, and my good friend Allan Baggett. Without them, none of my manuals would be as good as they are.

A big thank you to my wife, Marie, and my kids. I need your support and understanding to spend the hours needed to create these manuals.

Jonathan Pickup, January 2015.

Table of Contents

Introduction.....	iii
Project 1: Landscape Area Analysis	1
Project 2: Quick Domestic Project	15
Project 3: Domestic Project	33
Step 1 Document Setup.....	33
Step 2 Layer Setup	41
Step 3 Importing a Scanned Image	44
Step 4 Planting	46
Step 5 Hardscape	62
Step 6 Plant Counting.....	66
Step 7 Drawings and Annotation	70
Step 8 Editing Plant Placement	73
Step 9 Editing Plant Graphics	76
Step 10 Change Plant Grouping.....	86
Project 4: Simple Commercial Project	91
Step 1 Document Setup.....	91
Step 2 Importing DXF/DWG File (Architect's Plan).....	93
Step 3 Placing the Landscape Areas	98
Step 4 Vectorworks Plant Database	114
Project 5: Simple Park Drawing.....	128
Step 1 Importing a Survey Drawing	128
Step 2 Checking the Imported Drawing	131
Step 3 Creating the Landscape Layer	133
Step 4 Edit the Imported Drawing	134
Step 5 Drawing the Paths	138
Step 6 Adding the Lawn.....	145
Step 7 Car Parking	148
Step 8 Placing Plants.....	152
Step 9 Counting Plants	156
Step 10 Creating a Drawing.....	158

Project 6: Commercial Park Drawing.....168

Create a New File..... 168

Importing a Survey Drawing 168

Check the Imported Drawing..... 170

Create the Landscape Information 176

Create Car Parking..... 176

Count the Car Parking..... 182

Scheduling the Planting..... 192

Scheduling Hardscape Areas 194

Exporting the Drawing 205

Revisions from the Consultant..... 206

SAMPLE

Project 1: Landscape Area Analysis

We can use one of the Landmark tools (Landscape Area) to analyze the landscape areas and to provide a budget price. This has a couple of advantages: it is quick, and you can make sure you are within the budget.

At the very early stage of a project, the client may not want to pay you for a lot of work they cannot afford. Creating a quick concept with a budget figure will let you know in a few minutes if the client can afford your design.

- Open the file **Project_1.sta** from the exercise folder. This file is a Vectorworks template file. It has some drawn information already on it, so all we have to do is add the areas we want to the plan.

- Go to the **Site Planning** tool set.
- Choose the **Landscape Area** tool.

- Go to the **Tool** bar.
- Click on the **Preferences...** button.

This opens the dialog box where you can add plants, choose the look of the area, and so on. Later on, we will look at this dialog box in detail.

- Type in a **Name** for the landscape area.
- Click on the **Tag Display** pop-up menu.
- Choose **On**. This will show the name of each landscape area as we add it.
- Click on the **OK** button.

- Zoom in to make it easier to see the plan. You can use the scroll wheel on the mouse, or you can use the Zoom tool on the **Basic** tool palette.

- Move to the top-left corner of the site.
- Click once to start the landscape area.

- Move the cursor down the left-hand boundary, near the house.
- Click once.

- Move the cursor across the face of the house, just a small amount.
- Click once.

- Move the cursor up to the boundary.
- Click once.

- Move the cursor back to the start point.
- Click once.

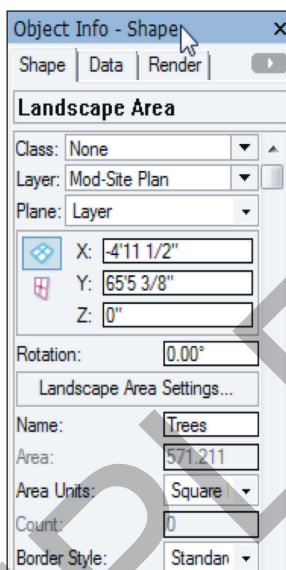

The landscape area has been created. Because of the choices we made on the Landscape Area Preferences, we have the name of the landscape area, and we also have the actual plan area shown.

The **Object Info** palette now displays the information about the Landscape Area.

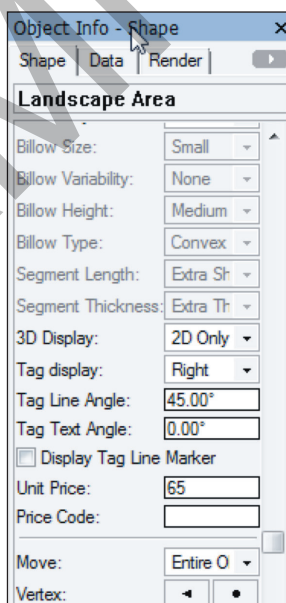

- Go to the **Object Info** palette.
- Change the **Name** of the area to **Trees**. This could be an area of tree planting.

- Scroll down the Object Info palette to the **Unit Price** field.
- Enter a budget price for the planting, based on your area settings. If you are using metric, enter your price per square meter. If you are using imperial, enter your price per square foot.

This is a very rough way of working, but it will give us a very quick price.

The location of the area tag (the name and area) will get in the way of the other landscape areas we want to create, but we can relocate the tag.

- Go to the **Basic** tool palette.
- Choose the **Selection** tool.

- Go to the **Tool** bar.
- Ensure that the **second** mode is active. This will allow us to relocate the Landscape area tag.

- Move the cursor to the blue handle at the top left of the tag.
- The cursor should change to a double-headed arrow (the interactive rescale cursor).
- Click once.

- Move the cursor to a new location.

- Click once.

The tag will be relocated. If this location is not satisfactory, relocate the tag.

- Move the cursor to the blue handle at the end of the tag.
- The cursor should change to a double-headed arrow.
- Click once.

- Move the cursor to a new location.

- Click once.

The tag will be relocated.

- Go to the **Site Planning** tool set.
- Choose the **Landscape Area** tool.

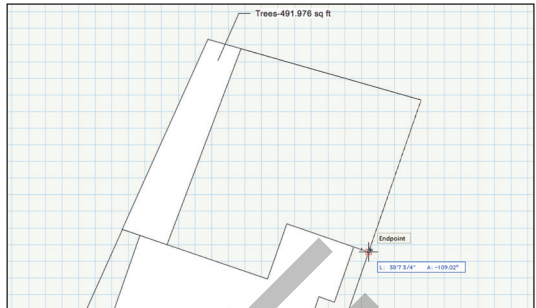

- Move the cursor to the top-right corner of the first landscape area.
- Click once to start the next landscape area.

- Move the cursor across the boundary to the top-right corner.
- Click once.

- Move the cursor down the boundary, near the house.
- Click once.

- Keep drawing your area until you get back to the start point.
- Click once.

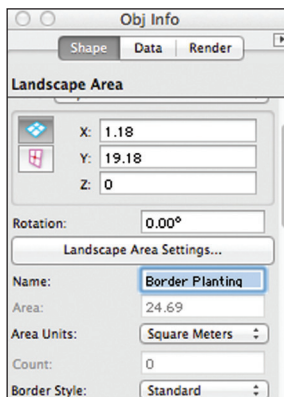

The landscape area has been created.

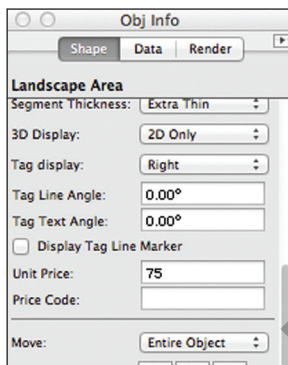

The Object Info palette now displays the information about the Landscape area.

- Go to the **Object Info** palette. Change the **Name** of the area to **Border Planting**. This could be an area of border shrubs or ground cover.

- Scroll down the Object Info palette.
- Enter a budget price for the planting, based on your area settings. If you are using metric, enter your price per square meter. If you are using imperial, enter your price per square foot.

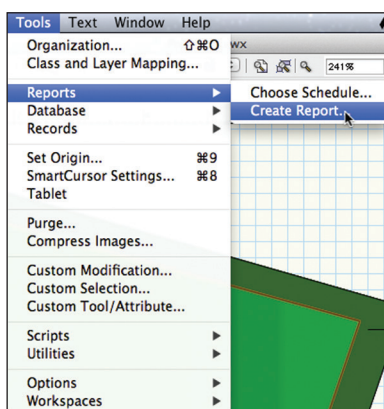

- Use the same technique to draw an area for the lawn.
- Enter the name for the lawn on the Object Info palette, and enter the budget price.

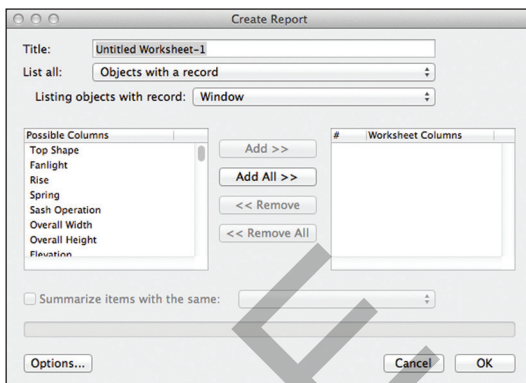

Don't forget that you can use the Attributes palette to change the look of the areas in order to make it easier for the client to understand.

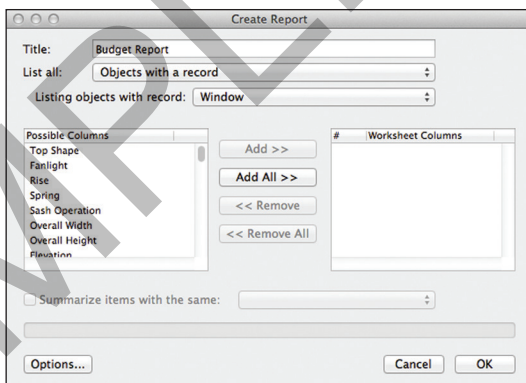

- Go to the **Menu** bar.
- Choose **Tools > Reports > Create Report...**

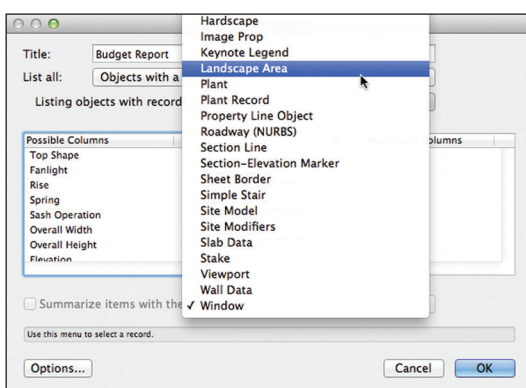

This dialog box opens. We use this to set up the options for the report.

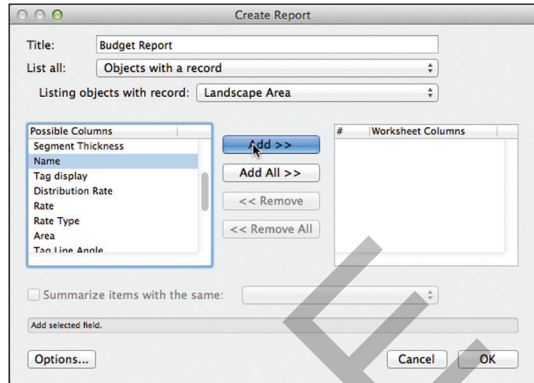

- Type in the name of the report at the top of the dialog box, where it says **Title**.

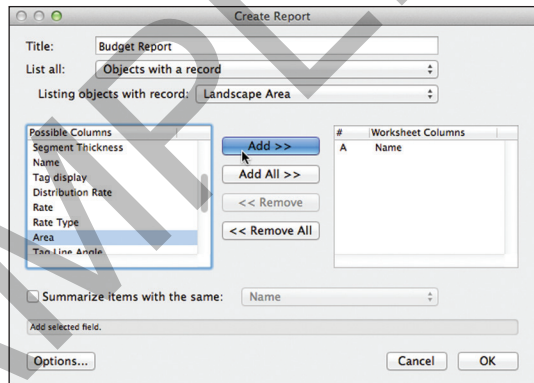

- Click on the pop-up menu, **Listing objects with record**.
- Choose **Landscape Area**.

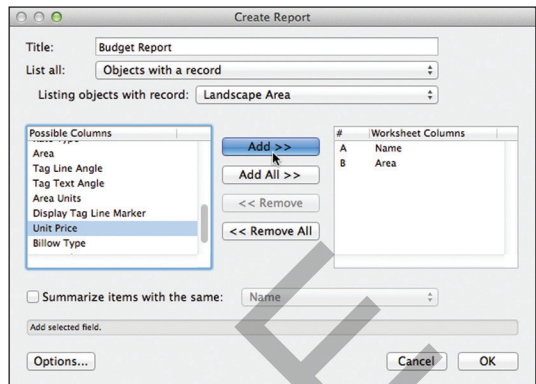

- Scroll down the left side to find the field called **Name**.
- Click on **Name**.
- Click on the **Add >>** button. This will add the Name field to our report. The order in which you add the fields is important, as it defines the order of the budget report.

- Scroll down the left side to find the field called **Area**.
- Click on **Area**.
- Click on the **Add >>** button. This will add the Area field to our report.

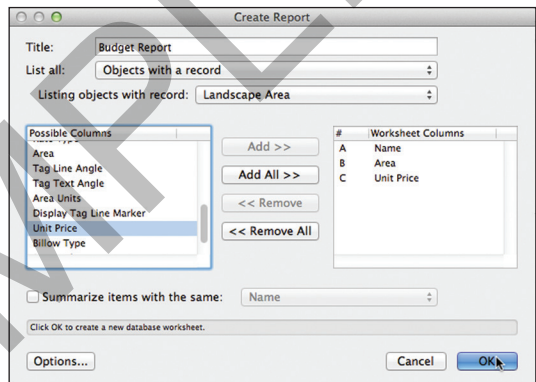

- Scroll down the left side to find the field called **Unit Price**.
- Click on **Unit Price**.
- Click on the **Add >>** button.

- Click on the **OK** button.

Vectorworks will search the file, looking for all your landscape areas. For each area you will see the name, area, and unit price. The report will be a worksheet (the Vectorworks version of a spreadsheet).

Your report opens in a new window.

The 'Budget Report' window is shown as a spreadsheet. The columns are labeled 'Name', 'Area', and 'Unit Price'. The data is as follows:

	Name	Area	Unit Price
1			
2			
2.1	Border Planting	2554.429	65
2.2	Trees	523.778	0
2.3	Grass	418.671	65
3		1611.98	0
4			
5			

- Click on cell **D2**.
- Type in an equals sign (=).
- Click on cell **B2**.

	A	B	C	D
1	Name	Area	Unit Price	
2		3	2554.429	65
2.1	Border Planting		523.778	0
2.2	Trees		418.671	65
2.3	Grass		1611.98	0
3				
4				
5				

- Type in a times sign (*).
- Click on cell **C2**.

	A	B	C	D
1	Name	Area	Unit Price	
2		3	2554.429	65
2.1	Border Planting		523.778	0
2.2	Trees		418.671	65
2.3	Grass		1611.98	0
3				
4				
5				

- Click on the green tick to complete this formula.

	A	B	C	D
1	Name	Area	Unit Price	
2		3	2554.429	65
2.1	Border Planting		523.778	0
2.2	Trees		418.671	65
2.3	Grass		1611.98	0
3				
4				
5				

Vectorworks calculates the cost of each area based on the areas you drew and the unit price of each area.

The total price is shown in cell D2. If this is more than your client wants to spend, you will have to adjust your design by changing the areas or the prices.

	A	B	C	D
1	Name	Area	Unit Price	
2		3	2554.429	160
2.1	Border Planting		523.778	76
2.2	Trees		418.671	65
2.3	Grass		1611.98	20
3				
4				
5				

There is a lot more we could do with this worksheet, but as this is the first exercise, I wanted to keep it simple.

For example, the worksheet could be added to the drawing, and the unit prices could be amended directly on the worksheet to get the project within budget.

Jonathan Pickup | fifth edition

VECTORWORKS LANDMARK Tutorial Manual

written with version 2015

ABOUT THE AUTHOR

Jonathan Pickup is an architect trained in New Zealand and in the United Kingdom with more than 25 years of experience. He received his Bachelor of Architecture (BArch) degree from the University of Auckland in New Zealand. He later spent more than eight years in England where he learned to use several CAD packages, including MiniCad, and began teaching this forerunner of Vectorworks. Upon returning to New Zealand in 1997, he established archoncad, a Vectorworks training and consulting company. He has written several Vectorworks training manuals for architects, landscape architects, educators, and design students. Jonathan also organizes the New Zealand Vectorworks User Group and provides its main direction.

VECTORWORKS LANDMARK

Based on his successful Vectorworks Landmark course taught in New Zealand and online, Jonathan Pickup's training guide provides Landmark basics and gently leads the new user through the completion of complex landscape plans. This tutorial offers advanced users guidance regarding the new features in Vectorworks 2015 as well as instruction on fundamental Landmark concepts. The topics discussed apply to both residential and commercial projects.

The manual uses a series of exercises to reinforce the learning of Vectorworks Landmark program features and workflow capabilities, starting with a very simple exercise on landscape budgeting. Content and exercises build in complexity, and by the end of the manual the user will be able to

- use the plant database.
- create custom plants.
- edit the plant graphics.
- import drawings from consultants.
- create planting plans.
- send the drawings back to a consultant.
